METRIC VOLUME READY RECKONER FOR ROUND TIMBER

1. These tables are the metric equivalent of the old established Hoppus tables and are used in exactly the same way. Mid diameters in centimetres are used instead of mid quarter girth in inches, lengths are expressed in metres rather than in feet, and volumes are given in cubic metres.
2. **Lengths** (measured from the butt end) will be rounded down to the nearest 0.1 m for lengths up to 10 m and rounded down to the nearest whole metre for lengths greater than 10 m. The lengths in the tables are tabulated from 1.0 m to 10 m. For lengths greater than 10 m the decimal point in the lengths and volumes is moved one place to the right. For example, for a mid diameter of 20 cm, in place of 1.1 m length and a volume of 0.035 cubic metres, read 11 m and 0.35 cubic metres, and so on.
3. **Diameters**, taken at the mid point of the rounded down length will usually be measured with girthing tapes calibrated in centimetres diameter, and will be rounded down to the nearest whole centimetre. (Rounding down will be achieved automatically with classifying tapes of the type used by the Forestry Commission). The minimum top diameter for volume measurement is 7 cm over-bark.
4. **Volumes**, expressed in true cubic metres, include bark if the mid diameter is measured over-bark, and exclude bark if the mid diameter is measured under-bark.
