

Yorkshire & The Humber Woodfuel Directory 2011

2

Introduction

66 Yorkshire and The Humber is a diverse and varied region with a long history of power generation and solid fuel installations, previously based on the region's coal resource.

This, when combined with the potential to secure a significant increase in biomass from the region's under-managed woodlands, gives us a unique opportunity to help continue our move to a low carbon economy through the use of renewable energy.

The development of the **Woodfuel Strategy** (launched in 2005) was seen as a key step in taking forwards the opportunities that woodfuel across the region presents. This first regional directory is a manifestation of this.

Its aim is to reinforce the links in the woodfuel supply chain in order to ensure consistent and effective delivery on the ground. The priorities are drawn from the already agreed regional **'Vision for Biomass'** – connecting suppliers with producers was one of its key objectives.

The Forestry Commission now seeks to build on the work of the South Yorkshire Woodfuel cluster and the supply chain development programme; the Wood Energy Co-ordinator recruitment in the White Rose Forest; and Yorkshire Woodfuels co-ordinated by Yorwoods. We are grateful to all of these partners and the Biomass Energy Centre who have proved vital in the development of this directory.

14

Regional Activity on Woodfuel

Yorkshire & The Humber has 92,082Ha of woodland, 6% of the region's total land cover, 19,847Ha are currently under the management of the Forestry Commission and the remaining 70,280Ha are under private or local authority ownership.

Many of these woodlands, around 50%, are currently undermanaged or un-managed, and could supply in the order of 150,000 Oven Dry Tonnes (ODT) of material per annum to the local woodfuel market.

These woodlands have the potential to develop the market, giving the region a great opportunity to bring them back into management with the associated improvements in biodiversity this would create.

Wood and other sources of biomass have an important contribution to make to our future energy needs. Climate change is a reality and using woodfuel will help reduce our reliance on burning fossil fuels. New markets for woodfuel will help to create and maintain rural jobs as well as contribute to the sustainable management of our woodlands.

The Woodfuel Strategy for England

The Forestry Commission – through **'A Woodfuel Strategy for England'** – is working to facilitate an increase of two million tonnes (2mt) of wood used each year as a biomass fuel by 2020. The focus is on community users and small businesses, utilising wood from currently under-managed woodlands for local heat generation in modern, efficient appliances.

Regional Activity

The Forestry Commission is currently working with regional partners such as CO₂Sense, South Yorkshire Forest Partnership, White Rose Forest and Yorwoods to help deliver about 50,000m³ extra to the woodfuel market regionally.

The Forestry Commission has helped to produce a series of strategic guidance documents. These include; **'The Vision for Biomass'** and the **'Regional Forest Strategy'** which together guide the region's long term direction. It has also provided a number of guides and helpful publications which can be accessed at **www.forestry.gov.uk/yhwoodfuel**

The Biomass Energy Centre (BEC)

BEC aims to draw together information from existing sources into one easy to use service based around a website and an information enquiry service to UK individuals, companies, local authorities and other UK organisations.

BEC focus on the various biomass fuel types that are commercially available or being researched. It provides information on fuel processing and supply chains, currently with an emphasis on woodfuel and heat production. BEC provide information to anyone in the UK with an interest in biomass-derived solid, liquid, gaseous fuels and associated conversion technologies.

BEC Supplier Listings

BEC run a registration service to assist current and prospective users of woodfuel appliances to locate potential suppliers of suitable fuel. There is, however, no implied recommendation or endorsement by BEC or the Forestry Commission of any supplier listed.

The Biomass Energy Centre is working with the Forestry Commission Regional Woodfuel Team to expand this database. It is free to sign up to and is available at **www.biomassenergycentre.org.uk** The registration form can be found in Part D of this directory.

Yorkshire & The Humber Supplier Listings

If you would like to appear in future updates of this directory, and are based in Yorkshire and The Humber (i.e. fuel suppliers) or supplying the region (i.e. appliance companies), contact the Forestry Commission, Regional Co-ordinator (Woodfuel).

- T: 01904 448778
- E: yorkshirehumber.fce@forestry.gsi.gov.uk

CO₂Sense

CO₂Sense was established by Yorkshire Forward to help businesses in the region to prosper in the low carbon economy.

The company provides advice and funding to help environmental companies to grow. They work with partners to help all organisations to fund and develop initiatives that reduce their carbon emissions.

CO₂Sense Woodfuel Programme

The Programme offers a flexible support package including information, advice and funding for the supply and use of woodfuel within Yorkshire and The Humber and is delivered with support from the Forestry Commission and subregional partners South Yorkshire Forest Partnership, the White Rose Forest and Yorwoods.

Woodfuel Supply

Existing and new entrant woodfuel suppliers can benefit from advice and support from the programme. Targeted funding support is offered for the advanced purchase of green soft wood timber for drying, and for the development of the woodfuel supply infrastructure including equipment such as chippers, fuel stores and specialist woodfuel handling and delivery vehicles. The programme also supports other initiatives which improve the strategic production capacity for quality wood chip and pellet within Yorkshire and The Humber.

Woodfuel Use

The programme offers support for commercial/public organisations looking to implement a woodfuel heat solution. This includes advice and support from the programme, including funding support for feasibility studies, study tours and other activity needed to help organisations make the move to woodfuel, such as support in establishing an ESCo. The programme also supports and can fund the engineering conversion of boilers from coal or oil to woodfuel, the implementation of new woodfuel boiler systems, and other initiatives that increase Yorkshire and The Humber's capacity to install woodfuel heating systems. It also offers the lease of a 2 Megawatt wood pellet boiler to allow companies hands-on experience of and confidence in woodfuel technology before committing capital expenditure.

Woodfuel Trade

The programme is supporting open and transparent trade in woodfuel through on-line trading platforms and also the uptake of woodfuel quality standards.

Best Practice Advice

The programme offers advice on the supply and use of woodfuel through one to one support, events, study tours, case studies, guidance documents, sector news etc. The central hub for accessing this information is the free online CO₂Sense woodfuel network found at:

www.co2sense.org.uk/ Networks/renewableenergy/ woodfuel/default.aspx

Contact the woodfuel team at:

- T: 0113 2378400
- E: woodfuel@CO2Sense.org.uk
- W: www.CO2Sense.org.uk

The Woodfuel Programme does not support firewood production

What type of woodfuel heating system should I install?

Yorkshire & The Humber Woodfuel Directory 2011 What type of woodfuel heating system should I install?

10 A

Energy Supply Companies (ESCo's)

Energy Supply Companies (ESCo's) sell the heat to the customer instead of appliances and/or fuel. They may install, own and maintain the boiler, or may sub-contract some, part or all of the supply. Heat used by the customer is metered, usually as hot water flow rate and the temperature difference between the outflow and return measured.

ESCo's become fully responsible for ensuring continuous operation and suitable quality of the fuel supply. Because fuel supply is decoupled from heat supply the ESCo is free to choose the optimum combination of fuel; based on calorific value, price, availability and other contractual stipulations such as sustainability. They negotiate for a reliable supply, potentially working with a number of providers.

The ESCo will also be responsible for ensuring any maintenance takes place as required and any faults or failures are rectified as soon as possible. This is often to avoid penalty payments, as contracts will usually contain clauses if heat becomes unavailable.

The model effectively allows the final user to be ignorant of any practical details of the heating system, even the fact that it uses biomass fuel. It is particularly suited to installations where multiple units are supplied from a single boiler, such as district heating, sites without maintenance staff or large building installations.

Yorkshire & The Humber Woodfuel Directory 2011 **Fuel Storage Providers (National) – Chip & Pellet**

Clean Waste Resource (Regional)

There is an estimated 500,000 tonnes of waste wood available in Yorkshire & The Humber (WRAP 2009), and some of this will be available for use as woodfuel depending on what type of wood it is.

In comparison with virgin timber forestry, waste wood tends to have a higher calorific value because most processed timber has been kiln dried.

Potential sources are local joineries and manufacturers. With an increase in biomass plants however, there is more demand for clean waste wood.

Clean waste wood can be burnt in normal biomass boilers. If it is contaminated with halogenated organic compounds or heavy metals (from treatment), it can be only be burnt in a WID (Waste Incineration Directive) approved boiler.

One source of information about waste wood is Why Waste (**www.whywaste.org.uk**) which is a free online waste exchange for business waste in Yorkshire & The Humber. You can register via the website, and either post waste offered or wanted.

'Find Recyclers Near You' is an interactive database produced by CO₂Sense which you can use for finding recyclers of various waste products, see **www.co2sense.org.uk**

For other queries, or for assistance in finding an outlet for your waste wood, contact the Wood Project Manager, CO₂Sense,

Smoke Control Areas and the Clean Air Act

The Clean Air Acts of 1956 and 1968 were introduced to deal with the smogs which were caused by the widespread burning of coal for domestic heating and by industry.

The Acts gave local authorities powers to control emissions of dark smoke, grit, dust and fumes from industrial premises furnaces and to declare 'smoke control areas' in which emissions from domestic properties are banned.

Since then, smoke control areas have been introduced in many of our large towns and cities across Yorkshire & The Humber.

The implementation of smoke control areas, the increased popularity of natural gas and the changes in the industrial and economic structure of the UK lead to a substantial reduction in concentrations of smoke and associated levels of sulphur dioxide (SO₂) between the 1950s and the present day.

These Acts, together with other associated clean air legislation, were repealed and consolidated into the Clean Air Act 1993. The regulations and orders made under this Act provide the current legislative controls. Control of smoke may also help reduce emission of a wide range of other pollutants.

Under the Clean Air Act local authorities may declare the whole or part of the district of the authority to be a smoke control area. It is an offence to emit smoke from a chimney of a building, from a furnace or from any fixed boiler if located in a designated smoke control area.

It is also an offence to acquire an 'unauthorised fuel' for use within a smoke control area unless it is used in an 'exempt' appliance ('exempted' from the controls which generally apply in the smoke control area). The current maximum level of fine is £1,000 for each offence.

Your local authority is responsible for enforcing the legislation in smoke control areas and you can contact them for details of any smoke control areas in your district. They should also have details of the fuels and appliances which may be used in these controlled areas.

For further information: www.uksmokecontrolareas.co.uk

For exempt appliances listings see: www.smokecontrol.defra.gov.uk/appliances

Yorkshire & The Humber Woodfuel Directory 2011 Smoke Control Areas and the Clean Air Act

Yorkshire & The Humber Microgeneration Partnership

The Yorkshire and The Humber Microgeneration Partnership (YHMP) was established in 2009 – a regional collaboration between installers, manufacturers, the Energy Saving Trust, and other advocates. The Partnership is the first of its kind in the UK, with over 80+ members and rapidly growing.

The Partnership aims are:

- To promote the installation of microgeneration technologies in Yorkshire and The Humber.
- To ensure high customer care and installation standards.
- To highlight best (and worst) practice in the microgeneration sector in the region.
- To represent the views of Yorkshire and The Humber Microgeneration sector at a local, regional and national level as appropriate.

YHMP produces a quarterly newsletter – MANY – to promote microgeneration, designed to be of general interest to the public but also include more specific information for the industry.

MANY is distributed to over 400 key opinion formers and stake holders. Content is drawn from members of the Partnership, industry news and offers a regional perspective on national news affecting the sector.

The Partnership also hosts the annual Yorkshire and The Humber Microgeneration Conference and Awards, showcasing microgeneration in the region and sharing best practice in the sector.

Membership is open to all MCS certified installers in the Yorkshire and The Humber region, and those working towards it, as well as manufacturers and advocates of renewable technology.

Yorkshire & The Humber Woodfuel Directory 2011 Yorkshire & The Humber Microgeneration Partnership

Accredited Installers (Regional) – Microgeneration Certification Scheme

The Microgeneration Certification Scheme (MCS) is an independent scheme that certifies microgeneration products and installers in accordance with consistent standards. It is designed to evaluate microgeneration products and installers against robust criteria providing greater protection for consumers.

It has support from the Department of Energy and Climate Change, industry and non-governmental groups as a prime method for making a substantial contribution to cutting the UK's dependency on fossil fuels and carbon dioxide emissions.

Home and Business Owners

If you are a home or business owner you can find information on the range of microgeneration technologies, grant schemes, planning considerations and search for certified products and/or installers at **www.mcs.org.uk**

Product Manufacturers and Installers

The MCS is a third party certification process, this means there are a number of Certification Bodies you can decide to certify with, biomass appliances and installers can be undertaken by HETAS for example, each Certification Body has its own pricing schedules and timelines.

Accredited Installers (Regional) – HETAS Registered Installers

HETAS is the official body recognised by government to approve solid fuel domestic heating appliances, fuels and services. Its work in approving products covers boilers, cookers, open fires, stoves, room heaters, factory made chimneys, carbon monoxide detectors and alarms suitable for use with solid fuel.

Installers

With the increasing complexity of biomass appliances and heating systems, HETAS provides additional training to provide the information needed for this type of installation for installers.

Training provides background information to enable the engineer to carry out feasibility studies, professionally advise clients, consider fuel types and storage options as well as design systems and installations to suit the varying site circumstances.

Successful completion of this theoretical and practical course will allow a HETAS registered engineer to extend their registration categories to include **'mechanically fed appliances'** in Category 5 – Biomass Heating.

PART B

Regional Woodfuel Suppliers

- Fuel Types
- Fuel Quality & Testing
- Fuel Quality Standards CEN
- Other Standards
 - ÖNORM, DIN, BS EN 303-5:1999, CPET
- Basic Moisture Content Testing
- HETAS Solid Biomass Assurance Scheme
- Wood Pellet Suppliers
- Woodchip Suppliers
- Firewood Suppliers
- On Site Chipping Contractors
- Briquette Suppliers
- Charcoal Producers & Bag Suppliers

Suppliers Listings:

The suppliers listed are based within the Yorkshire & The Humber area, there are further suppliers working within the region based in adjacent areas, their details can be found on the woodfuel suppliers pages of the Biomass Energy Centre website.

Yorkshire & The Humber Woodfuel Directory 2011

Fuel Types

Wood Chip

Woodchips are produced from both virgin and clean waste wood timber, have a bulk energy density of about 50% of that of solid wood and should meet an appropriate quality standard if they are to be used reliably in combustion equipment, especially small scale and domestic appliances.

Physical parameters, such as maximum size and absence of slivers/spears or fines (sawdust), and maximum moisture content are important to allow reliable operation and prevent feed blockages. Also levels of contaminants and ash production will have an impact on emissions and maintenance schedules.

Wood Pellets

Wood pellets are made from dry sawdust compressed under high pressure and extruded through a die.

Pellets come in a range of sizes; for domestic and relatively small scale systems 6 or 8mm is typical, while for larger systems 10 or 12mm are common.

Wood pellets should be dry, clean, mechanically robust and have an ash content defined by the appropriate standard to which they have been made. This may also define other contaminants such as chlorine content. They should also flow freely and can be delivered pneumatically.

Charcoal

Charcoal is a black substance that resembles coal and is used as a source of fuel. Charcoal is generally made from wood that has been burnt, or charred, while being deprived of oxygen so that what's left is an impure carbon residue.

While charcoal is used in the manufacture of various objects from crayons to filters, its most common use is as a fuel where is is used in bar-b-ques and outdoor cooking appliances where it is said to have superior flavouring characteristics.

Briquettes (& Heat Logs)

Briquettes & Heat Logs are similar to wood pellets, but physically larger. Sizes vary but briquettes can be diameters from around 50mm to 100mm+. Briquettes are usually between 60mm and 150mm in length.

They can offer a cleaner, more consistent alternative to firewood logs, offering higher energy density and steady combustion.

Firewood

In general hardwoods make good firewood as they have higher calorific value and burn more slowly. Softwoods can be easier to light, burn hotter quicker, can be useful for kindling, are often more abundant and cost less.

Provided they are of suitable size to fit in the firebox, feed hopper or grate, log sizing is relatively straight forward. The drying of logs is called seasoning and is done to remove moisture and improve burn.

Further information is available in a series of guides at www.forestry.gov.uk/yhwoodfuel

28 B

Fuel Quality & Testing

Fuel standards describe biomass fuels, they are vital for all forms of biomass to become a commodity fuel that users can buy with confidence. They ensure reliable, efficient, trouble free operation of appliances.

There is a wide range of biomass potentially suitable for energy use. However, most types of equipment work effectively with a very specific type or form of biomass fuel.

Even with a specific form of fuel, such as woodchips, there can be major differences in characteristics and properties between different batches chipped using different chippers, from different material, or with different moisture content.

While it is all eminently usable, one batch will allow a particular piece of equipment to operate according to specification. Another batch may cause blockages in the fuel feed line, inefficient operation, emissions, condensation in the flue, or at worst automatic shut down of the equipment as it moves outside its design operating regime. In different equipment, however, the second batch of fuel may be perfectly acceptable. Ensure fuel purchased is specific to the boilers requirements.

Several laboratories and consultants are available to test both the chemical and physical properties of biomass fuels.

Fuel Quality Standards – CEN

The European standards organisation is called CEN (Comité Européen de Normalisation). CEN Technical Committee 335 – Solid biofuels was established around 10 years ago with a mandate to produce standards for solid biofuels including woodfuels like logs, pellets, briquettes, chips, hog fuel and sawdust.

CEN will publish standards called Euro Norms that will replace all the other standards currently used in Europe. In the meantime a series of Technical Standards have been issued as 'drafts in development'.

These can be downloaded free from the Biomass Energy Centre web site (**www.biomassenergycentre.org.uk**)

CEN TS/14961:2005 Fuel specifications and classes, allows all the relevant properties of woodfuels to be described and CEN TS/15234:2006 Fuel quality assurance (FQA), describes what needs to be done to ensure that fuel with the agreed properties is delivered, and how to label it. The properties that can be specified for particular fuels are divided into normative properties, that must be provided, and informative properties, that are offered voluntarily or by agreement.

Many other properties can be specified including concentrations of particular elements, volatile matter, ash melting behaviour, etc. Different specifications are required for different fuels, and for pellets and briquettes these include mechanical durability and particle density.

In addition to the standards for specification there are a complete set of standards covering terminology, sampling and all of the physical, mechanical and chemical tests required to ensure that delivered fuels meet the correct specifications.

The Forestry Commission has representatives who sit on the CEN Technical Committee 335.

EXAMPLE:

CEN/TS 14961:2005; Woodchip

Normative Specifications:

- Origin
- Particle size
 (P16/P45/P63/P100)
- Moisture content (M20/M30/M40/M55/M65)
- Ash content (A0.7/A1.5/A3.0/A6.0/A10.0)

Informative Specifications:

- Net energy content (lower heating value (LHV)) as MJ/kg or kWh/m³ loose
- Bulk density in kg/m³ loose
- Chlorine content (Cl0.03/Cl0.07/Cl0.10/Cl0.10+)
- Nitrogen
 (N0.5/N1.0/N3.0/N3.0+)

W: www.cen.eu

Other Standards – ÖNORM, DIN, BS EN 303-5:1999, CPET

While the CEN/TC 335 suite of standards are intended to be the universal standards for solid biofuels across Europe, prior to these many countries developed their own standards.

ÖNORM

The Austrian Standards Institute is ÖNORM. They are currently adopting its own implementation of the CEN/TC 335 standards. Many Austrian boilers have been installed in the UK and specify fuel according to ÖNORM M7 133 for woodchips (Woodchips for energy generation: quality and testing requirements) and ÖNORM M7 135 for pellets.

DIN

The (DIN) German Standards Institute (Deutsches Institut fur Normung) also developed its own biomass fuel standards, which are sometimes encountered.

BS EN 303-5:1999

In addition to specifications for biomass fuels, there are also specifications for biomass combustion equipment. BS EN 303-5:1999 applies to heating

boilers for solid fuels, hand and automatically fired, for nominal heat output of up to 300kW. This is the local UK implementation by the BSI of EN 303-5.

BS EN 303-5:1999 covers properties such as performance, efficiency, emissions, thermal output, pressure testing, safety measures and testing.

Central Point of Expertise on Timber Procurement (CPET)

The UK government's policy demands that all timber and timber products should come from independently verifiable legal and sustainable sources, or are Forest Law, Enforcement, Governance and Trade (FLEGT) licensed. The policy is mandatory for all central government departments, executive agencies and non-departmental public bodies (NDPBs). It also applies to other public sector bodies, such as local authorities, which have voluntarily adopted the policy. The requirements apply to all woodfuel used on the government estate.

Model specification text and model contract conditions are set out in the Timber procurement Advice Note August 2008 which can be found on the CPET website **www.proforest.net/cpet**

Government buyers will request evidence from contractors that the supplied products comply with the policy requirements for legal and sustainable timber. This evidence should cover both the source of the timber (chain of custody) and proof that this source is legally and sustainably managed.

This evidence can come in two forms:

- **Category A** evidence is independent certification of the timber and timber products by any of the forest certification schemes that meet the policy requirements (such as Forest Stewardship Council (FSC) and Programme for the Endorsement of Forest Certification (PEFC).
- **Category B** evidence is alternative documentary evidence that provides assurance that the source is legal and sustainable.

Basic Moisture Content Testing

The following guide was created by Rural Development Initiatives as part of their **Ignite** training brand. It gives a rough guide to moisture content assessment.

Chip Sampling:

- Take from the back of the delivery vehicle, at least 6 increments with a size 4 shovel, as per the draught CEN standard; CEN/TS 14778-2:2005 Solid biofuels
 Sampling – Part 2: Methods for sampling particulate material transported in lorries.
- This sample is then coned and quartered as per the draught CEN standard; CEN/TS 14780:2005
 Solid biofuels – Methods for sample preparation. This gives the analysis sample.

Further information and a guide to moisture content is available at www.biomassenergycentre.org.uk

Drying Method:

Please note that this is not a European standard method but does however give a very rough guide to the moisture content.

development initiatives

- 1. Weigh 4 plastic tubs when empty.
- 2. Split the analysis sample into 4 identical plastic tubs.
- 3. Weigh filled plastic tubs to give the wet weight.
- 4. Microwave each tub on high for 10 minutes, **stir** and then microwave on high for a further 10 minutes, **stir**.
- 5. Microwave on medium for a further 10 minutes, stir.
- Microwave on low for 5 minutes then weigh.
 Repeat step 5 until 3 consistent weights are obtained.
 This is the dry weight.

EXAMPLE:

Sample size:

- 1. 12 samples were taken from the back of the delivery vehicle (twice the number recommended for this size load) with a size 4 shovel.
- 2. This resulted in a combined sample weight of 13.2kg.
- 3. The combined sample was coned and quartered, this resulted in an analysis sample of 3.3kg

Drying Method:

1. The 3.3kg analysis sample was split into 4 and loaded into plastic tubs (which were weighed when empty) and then weighed to give the wet weight. These were microwaved inline with the protocol.

Results:	Sample 1	Sample 2	Sample 3	Sample 4
Wet Weight (g)	825	765	845	865
Dry Weight (g)	610	585	645	645
% Moisture	26	23.5	23.7	25.4

Average Moisture Content = 24.65 %

www.forestry.gov.uk/yhwoodfuel

32 B

HETAS Solid Biomass Assurance Scheme

The HETAS Registered Solid Biomass Assurance Scheme, provides an opportunity for manufacturers and suppliers of fuels to undertake certification that the fuels they are producing satisfy the relevant European Standards and that they have sufficient quality measures in place to ensure continued production to those standards.

The fuel supplier can then use a quality mark on their packaging and promotional literature.

Participation in the scheme is based on evidence acceptable to HETAS Ltd:

- That the product(s) meets the required standards
- That the producer/supplier has staff, processes and systems in place to ensure that the product delivered meets the required standards
- Periodic audits of the producer/supplier including testing as appropriate
- Compliance with the contract with the certification body for listing and approval including agreement to rectify faults as appropriate

The scheme is open to any company involved in the production and/or supply of biomass products including:

- Pellets made from wood and other biomass
- Logs / Firewood
- Briquettes made from wood and other biomass
- Chips made from wood and other biomass

Benefits

A HETAS certified supplier can demonstrate to potential customers they have supply chains in place and control systems that meet standards of sustainability and consistent quality. Customers can have confidence that the products supplied meet acceptable standards

Contact:

HETAS Ltd

Orchard Business Centre, Stoke Orchard, Cheltenham. GL52 7RZ

- T: 0845 634 5626
- E: info@hetas.co.uk
- W: www.hetas.co.uk

Expect to see quality suppliers signing-up to an assurance scheme run by HETAS. With consistent product labelling, it will be easier to choose appropriate fuel for an appliance. See **www.hetas.co.uk/public/ Solid_Biomass_Assurance_Scheme.html** for further information.

Yorkshire & The Humber Woodfuel Directory 2011

Woodchip Suppliers

Firewood Suppliers

The Forestry Commission **DO NOT** supply firewood in its processed form in Yorkshire & The Humber. Retail sales of firewood may be sourced from those companies listed checking local press, telephone listings or the internet.

The following businesses are listed as 'wholesale' if they sell timber from the region, both soft and hard wood for processing into firewood. Minimum delivery is in the order of 15+ tonnes as a norm. Businesses selling processed timber as firewood 'logs' for others to retail are indicated Both these suppliers also often have established 'log rounds' and retail logs. Others listed are only retail suppliers. When purchasing any firewood, either for processing or already processed, ensure that its provenance is known; it has been felled legally, ideally it is local and the species is confirmed, along with when the timber was felled. The latter two criteria will affect both its ability to burn and value.

 Denotes traders that hire firewood processors for DIY fuel production.

English Woodland Grant Scheme (EWGS)

The English Woodland Grant Scheme (EWGS) is the Forestry Commission's suite of grants for management, improvement of existing woodland and for creating new woodland. (**www.forestry.gov.uk**)

- Woodland Creation Grant; encouraging the creation of new woodlands, including annual Farm Woodland Payments to compensate for agricultural income forgone
- Woodland Assessment Grant; this is the gathering of information to improve management decisions
- Woodland Planning Grant; preparation of plans that both assist with management of the woodland and to meet the UK Woodland Assurance Standard (UKWAS)
- Woodland Improvement Grant; work in woodlands to create new and improve existing public public benefits in priority woodlands such as undermanaged Ancient Woodlands
- Woodland Regeneration Grant; supporting desirable change in woodland composition through natural regeneration and restocking after felling
- Woodland Management Grant; contribution to the additional cost of maintaining public benefits from existing priority woodlands through appropriate annual work such as thinning

Felling Licences

To help protect Britain's forests, a licence from the Forestry Commission is required to fell trees. It is an offence to fell trees without a licence if an exemption does not apply.

The overall process is described in the booklet **'Tree Felling – Getting Permission'** available from **www.forestry.gov.uk** or from the regional office.

Exemptions

Anyone involved in the felling of trees, the owner, agent, timber merchant or contractor must ensure that if required a licence has been issued and are felled, action, including prosecutions or being required to restock the site may be taken.

Exemptions can be found on the Forestry Commission website or via the regional Forestry Commission office. It is an offence to fell trees without a licence where one is required. If there is no licence or other valid permission, or if the wrong trees are felled, anyone involved can be prosecuted.

Conditions

Felling licences will normally include conditions that the felled area must be restocked (not applicable to thinning) and the trees maintained for a period not exceeding ten years. The Forestry Commission will discuss any proposed restocking condition with the applicant before a licence is issued.

A felling licence for thinning trees will be issued without a restocking condition.

Tree Preservation Orders (TPO)

In your application you must inform the Forestry Commission if the trees to be felled are covered by a Tree Preservation Order or are located in a Conservation Area.

Other Legal Controls

There are other legal controls on tree felling mainly covered by Tree Preservation Orders, Conservation Area designation and the Hedgerow Regulations and without any conditions attached to planning permission.

Local planning authorities administers these areas of legislation. Controls can also exist on the movement of timber.

English Woodland Grant Scheme (EWGS)

An application to fell trees can be made as part of EWGS application and, if approved will be issued with the grant scheme contract.

Woodland Planning Grant

Through a Woodland Planning Grant agreement, felling approval (clearfell and thinning) can be granted for up to 10 years. Plans can also provide evidence for owners demonstrating Category b compliance with the UK Government's Timber Procurement Policy.

Environmental Impact Assessment

Only in exceptional circumstances will a felling licence be issued to fell an area of trees without subsequent restocking. Such an application will be assessed under the Environmental Impact Assessment (Forestry) Regulations 1999 and Open Habitats Policy.

Forestry Commission – Activity in Yorkshire & The Humber

The Forestry Commission currently employs a full time staff member as a Woodfuel Officer, based at the regional office at York.

This member of staff has the responsibility for acting as the regional advocate for using wood as a fuel, by working with fuel producers, installers, appliance retailers, researchers and other agencies to ensure the wider uptake, understanding and efficient use of virgin wood as a fuel.

Some of the functions this role fulfils are:

- Timber Brokerage, the sourcing of fuel wood across the region, both hard and softwood, predominately for log and chip markets
- Installation Assistance, feasibility & guidance. In order to pursue the wider up take and use of the fuel, advising on the efficient use of wood as a fuel, across all types; chip, log and pellet. Providing a 'sign posting' service helping suppliers develop their businesses, installers improve their 'reach' and ensure high quality efficient appliance uptake
- Biomass Business Support, working through both national and local governmental bodies to ensure policy is proactive in supporting biomass, and especially woodfuel as a heating choice across projects and their estates. This work is also mirrored with Non governmental organisations
- Advocacy, acting as the public face of woodfuel in region, ensuring the profile of woodfuel is covered in the media and is present at trade and public events
- Facilitation, working as the organiser of several local forums, linking the woodfuel supply chain. This work encompasses the Regional Biomass Forum, a group of key policy and decision makers, Biomass Local Authority Group which draws together over 20+ biomass portfolio holders from across the region and several industry forums including, woodfuel suppliers and biomass installers
- Resource Mapping, the Forestry Commission holds the key datasets of woodland management and boiler installations to assess the regions carrying capacity
- **Publications,** producing this directory, case studies and working closely with the Biomass Energy Centre to create key texts

Rudie Humphrey, current Woodfuel Officer

Yorkshire & The Humber Woodfuel Directory 2011 Forestry Commission – Activity in Yorkshire & The Humber

Activating Forest Owners (AFO) – Intelligent Energy Europe

AFO's main objective is to increase woodfuel supply from privately owned European forests. In terms of bioenergy promotion, private forest owners (PFO's) form a powerful forest owner group, as they possess most of the European woodfuel potential. AFO carries out various activities to initiate woodfuel supply clusters among PFO's. These clusters are brought together with the local potential woodfuel users, focusing on local small-and medium-scale heat plants.

The project operates during 2009-12 in six countries and five specific target areas. Finland and Austria are countries of high woodfuel utilisation level and strong experience of bioenergy harvesting and procurement systems. They will transfer best practices to less experienced partner countries with vast private forests ownership (France, Slovenia, Latvia and UK).

Results and best practices acquired in the project will be disseminated throughout all EU member states. The AFO project is funded under the Intelligent Energy Europe programme.

AFO project aims to mobilise the woodfuel reserves in the privately owned forests in Europe. With five target regions in the four partner countries:

- Limousin (France)
- Midi-Pyrénées (France)
- Cesis (Latvia)

58 D

- Slovenia (the entire country)
- South Yorkshire (UK) (Doncaster, Sheffield, Barnsley & Rotherham)

For further details contact:

South Yorkshire Forest Partnership T: 0114 2571199 E: team@syfp.org.uk

These target regions will act as case studies for various activation measures. In the first phase will identify the status and potential of woodfuel utilisation in the regions:

- Identification of woodfuel resources and potential suppliers on these regions
- Inquiries to point out barriers in mobilising woodfuel reserves
- Description and analysis of regional woodfuel markets
- Identification of woodfuel consumption and users of these regions
- Analysis of potential woodfuel consumption in these regions

Contact:

AFO

W: www.afo.eu.com

Intelligent Energy Europe

W: www.ec.europa.eu/ energy/intelligent

W: www.wood-fuel.org.uk

Measures to activate the formation of woodfuel supply clusters, thereafter the potential supply and demand of woodfuel markets are brought together to establish substantial supply chains:

- Division of sub-regions for woodfuel supply cluster formation
- Sub-regional workshops and study tours for potential woodfuel suppliers
- Formation of woodfuel supply clusters
- Training weeks in Austria and Finland, for the representatives of potential supply clusters
- Assisting the formation of functional business relationships between users and suppliers
- Communication and dissemination of projects results (such as approved woodfuel mobilisation methods) in partner countries and all EU 27-countries

Contacts

The White Rose Forest

The White Rose Forest is a partnership of local authorities, government and voluntary organisations working across West Yorkshire to 'play its part in creating a healthy, prosperous and environmentally resilient place for the people, economy and wildlife of our city region'. This includes the employment of a Wood Energy Co-ordinator.

Contact:

- T: 01484 234079
- W: www.whiteroseforest.org.uk

(Operates in Wakefield, Bradford, Calderdale, Leeds and Kirklees).

South Yorkshire Forest Partnership

Formed in 1991 South Yorkshire Forest Partnership was one of England's 12 Community Forests, a national partnership that has regenerated and revitalised the greenspace in and around some of our major towns and cities.

Since 2002, South Yorkshire Forest Partnership has also been promoting and developing woodfuel energy projects and has established the South Yorkshire Wood Energy Cluster.

Contact:

- T: 0114 2571199
- E: team@syfp.org.uk
- W: www.wood-fuel.org.uk

(Operates in Doncaster, Barnsley, Sheffield, Rotherham and North & North East Lincolnshire).

Yorwoods

Yorwoods is a not for profit, public and private sector backed initiative that provides support services to the forestry industry in the Yorkshire region, running a series of projects focused on developing the forestry sector through capital investment, woodfuel supply development, business support and training.

Contact:

- T: 01765 609355

Natural England

Natural England aims to conserve and enhance the natural environment, for its intrinsic value, the wellbeing and enjoyment of people and the economic prosperity that it brings.

Via the Energy Crop Scheme it aims to increase the amount of biomass grown in England, in appropriate locations. Energy crops are used as a substitute for fossil fuels, can contribute to a reduction in greenhouse gas emissions and help to combat climate change.

energy saving trust^{*} Keep up the good work

The Energy Saving Trust

The Energy Saving Trust has a mission to support 60 million people in the UK to act on CO₂. The Energy Saving Trust advice centre for Yorkshire and The Humber, based in York, is the local face of the EST, working with local partners, residents and communities to tackle climate change.

Promoting small-scale renewable energy production, including biomass, is a big part of this and the EST can support interested people by providing advice on which system is best for them.

Contact:

Training Courses – Ignite

Rural Development Initiatives Ltd. is a not for profit company that works with public sector partners to develop and manage projects that promote the sustainability of land based businesses. Working across sectors such as biomass, sustainable woodland management and rural fire, it delivers workforce training, supply chain & market development and delegated grant schemes. It also delivers the Ignition trade expo's across the UK.

They have developed the **Ignite** training brand.

Since its inception in 2004, **Ignite** has lead the way in raising the skill levels of the UK woodfuel sector. Constantly revised and updated to keep abreast of the ever-changing policy landscape, as well as technical developments in the industry, **Ignite** has been delivered across the UK.

Ignite has spurred a number of companies to embark on new business ventures in the rapidly expanding woodfuel market. **Ignite** has also played a key role in educating and informing a far wider audience than originally intended – energy consultants, plumbers, local authority officers and Business Link advisors have all participated in courses and actively contributed to the exciting learning atmosphere that accompanies every course.

The contribution that **Ignite** has made to the development of the UK woodfuel sector was recognised with a National Training Award in 2006. **Ignite** now consists of a series of training courses on the production and supply of woodfuel, including the award winning three day 'Woodfuel Supply Chain' course that provides a Customised Award in woodfuel production and supply from Lantra Awards.

The Woodfuel Supply Chain

The three-day 'original' course consists of four modules:

- Setting the Scene
- The Woodfuel Resource
- Woodfuel Systems
- Woodfuel Technology

Contact:

Rural Development Initiatives Ltd. Unit 9 Sycamore Business Park, Copt Hewick, Ripon. HG4 5DF

- T: 01765 609355
