

Social barriers to woodfuel production from farm woods

Norman Dandy (Forest Research)

Presentation to Farm Woodlands Forum Meeting June 2009, National Forest

What is 'woodfuel'? (varied terminology – a barrier ?)

Title	Process	Species	Product	Form
Biomass	Forestry	Various		Wood-chips Pellets Logs
	Short rotation forestry (SRF)	Eucalyptus Poplar Ash Southern Beech others	 'Clean' wood: •Non-timber stemwood (low diameter; tips; poor quality) •Branch wood •Stumps 	
	Short rotation crop (SRC)	Willow Poplar		
	Energy crop	Miscanthus	High-energy grasses	Bales
	Arboriculture	Various	Woody 'waste' ('contaminated' & 'clean')	Wood-chips Pellets
	Commercial & industrial activities	-		
			Food 'waste'	Various
	Agriculture	-	Biogas	Fuel gas
			Solid residue (e.g. straw; poultry litter)	Fuel
				Fertiliser
			Liquid residue (e.g. animal slurry)	
Biofuel	Agriculture	Oil seed rape	Biodiesel	- Transport fuel
		Grains, beets & others	Bioethanol

Objective: an increasing resource

- Each of the devolved Commissions have the objective to increase the woodfuel resource through:
 - *improved* and *increased* woodland management
 - new planting
- Targets and estimates not easy to compare as they include various types of material and have differing objectives:
 - Wales ⇒ 0.692m ODt/y 'clean wood' (251MW) currently 0.183m ODt/y available
 - England ⇒ 2m GMt/y (c. 1m ODt/y), 50% of 'unharvested' resource (by 2020)
 - Scotland ⇒ 1m GMt/y (c. 0.5m ODt/y) (by 2020) currently 0.41m ODt/y

Research Focus

1. What influences private landowners decisions regarding woodfuel production?

e.g. barrier = lack of landowner engagement

2. What forms of <u>partnerships</u> are appropriate to the establishment of an effective woodfuel sector? (and what is the role of the Forestry Commission?)

e.g. barrier = ineffective or contradictory working

3. How do 'the <u>public' understand</u> and perceive the use of woodfuel, and woodland management for woodfuel?

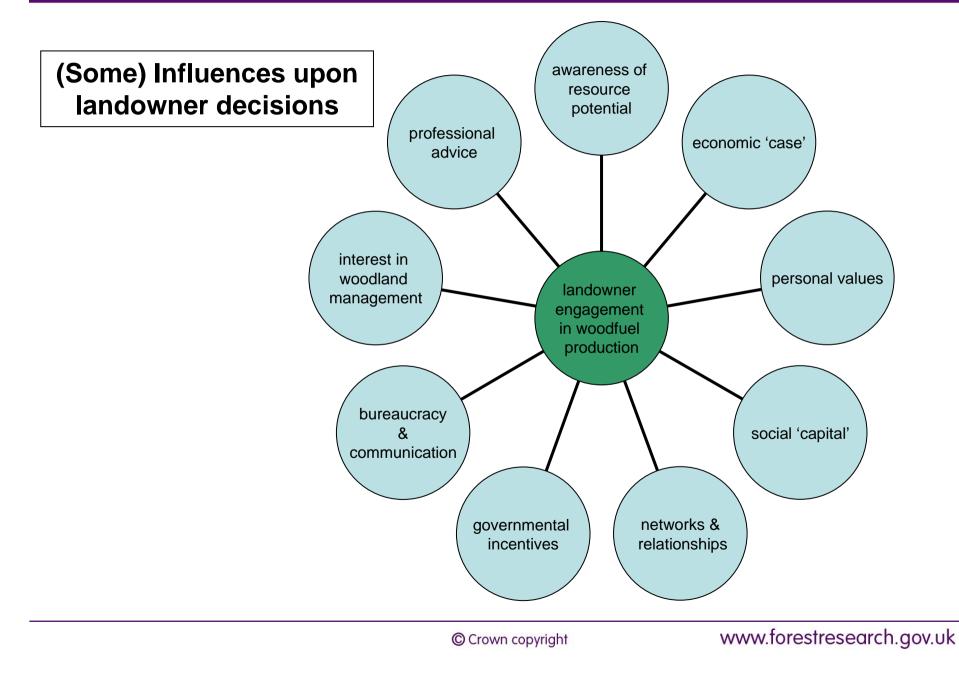

e.g. barrier = public opposition?

4. What <u>skills</u> are necessary to support an effective woodfuel sector and what changes in <u>employment</u> will there be?

e.g. barrier = lack of skilled workforce

Woodfuel from farm woods

Methodological challenges

- Can woodfuel be treated as a discrete product / issue for social & economic research?
- Landowners who are they and how to categorise? (are farm woods a discrete sector?)
- Woodfuel as a system what to look at? Where do partnerships start and finish?
- Understanding relative change interaction of markets and employment?
