Q3. Agree/disagree - Summary Table
BASE: All respondents

	Trees are good because they remove carbon dioxide from the atmosphere and store it in wood	Cutting down forests and woodland makes climate change worse, even if they are replanted	Using wood for fuel is better for climate change than using fuels such as coal and gas	Using wood for fuel makes climate change worse because it releases carbon dioxide	Using wood for building is better for climate change than using materials such as concrete, steel and plastics	Scotland could offset all its greenhouse gas emissions by planting more trees	Planting more trees can help us cope with climate change by providing shade and reducing the effects of flooding

Q4. Agree/disagree - Summary Table
BASE: All respondents

	There is nothing that anyone could do that would make any difference	No action is needed, let nature take its course	A lot more trees should be planted	Trees should not be felled in any circumstances, even if they are replaced	Different types of trees should be planted that will be more suited to future climates	More information should be provided about the ways in which wood can be used to lessen our impact on the environment
