- FE/FLS/NRW/FS = Forestry England/Forestry and Land Scotland/Natural Resources Wales/Forest Service. Private sector = all other woodland, including some other publicly-owned woodland.

▲ = Conifers ● = Broadleaves

- 1 ha = 1 hectare (approximately 2.47 acres).
- Figures in the tables are individually rounded, so the constituent items may not sum to the total given.
- One green tonne is equivalent to approximately 0.98 m³ underbark softwood or 0.88 m³ underbark hardwood, and to approximately 1.22 m³ overbark standing softwood or 1.11 m³ overbark standing hardwood.

A close-up photograph showing several layers of wood-based panels, likely oriented strand board (OSB), stacked on top of each other. The top layer is in sharp focus, revealing a dense, chaotic pattern of light-colored wood chips and strands. Below it, several layers of darker, more uniform wood planks are visible, creating a strong diagonal line across the frame. The lighting is warm and even, highlighting the textures of the different wood products.

There was an **8% increase** in sawnwood
